

*The way we produce and pack our products affects society,  
nature and our everyday life.*

*That's why we have developed our MULTIGEN modular system.  
To assure responsible packaging with the smallest impact possible  
– for our environment and all future generations.*

# MULTIGEN

The modular system for sustainable  
product solutions in glass and plastics.

# FIVE COMPONENTS. FIVE OPTIONS TO CHOOSE AND COMBINE.

To create your sustainable packaging solution.  
Just as you like.

VIRTUAL DESIGNER  
Create your individual product.

"Fire-Glass" consists of up to 50 % PCR. This circular economy allows us to save up to 1.2 kg of raw material with the use of 1 kg of cullets.

With a possible content of up to 100 % PCR & PIR, we create eco-friendly plastic solutions and therefore focus on recycled materials. In addition to that, we offer locking caps made of recycled wood to complete your sustainable packaging solutions.

"Air-Glass" is melted by 100 % electric driven furnaces at our German production sites. With 100 % CO<sub>2</sub>-free electricity from renewable energy we make sure to reduce our emissions and to maintain our high-standards for glass-melting.

At our German site in Langenau, only fully electric driven production machines are in use. This enables us to save 30 % electrical energy compared to the use of hydraulic machines.

More efficiency, more volume, less CO<sub>2</sub>. Our lightweight glass products save resources and enhance the beauty of your product, all at the same time.

Our lightweight plastics solutions offer a wide range of PET bottles in lightweight design with the same advantages as our lightweight glass.

With one-component water-based lacquers, decorations that do not impede glass recycling and eco-friendly processes we make sure that every product gets its perfect individual decoration.
